Model 1628 QC

- 16 AMP hours @ 10 Amp Hour Rate
- 1400 AMPS Peak Current
- 19.2"x7.5"x9.75"
- 54 LBS. Complete
- Not to be used as an aircraft battery charger.

All In One air portable/carry-on START PAC® complete with built in chargers, power plug and cables.

Units are 28.5 VDC output, with universal chargers that will accept 90-240 VAC 50/60 hertz.

NOTE: When storing the Start Pac® for more than 30 days, remove the battery pack from the charging unit and store separately.

The new patent pending **Start Pac® 1628QC** has a separate removable battery that can be changed in 15 seconds. This feature allows the user to change batteries in the field without needing to send the Start Pac back to the shop or Manufacturer.

The **1628QC** will give a quicker more robust start due to its higher voltage. This unit utilizes dual 3.5 amp chargers for reliability with a recharge time of 2.5 hours. These units will give three to five starts between charges.

Due to their lightweight and portability, these packs are especially suited for use in remote locations. Certain aircraft will allow the ship's generator to back charge a GPU. In this manner, Start Pac® can be recharged in the field without an AC source indefinitely. This unit will start turbine engines up to 800 horsepower.

This portable unit is mainly designed for emergency starting in remote locations. This unit is not designed for repeated daily starts or maintenance functions.

Batteries have no memory effect and can be recharged at anytime.
Made in the USA.

Certified

CE marked if purchased through [Airpart UK](#)
